Pokhara University Faculty of Science and Technology

Course code: MTH 250 (3 Credits)

Course title: Applied Mathematics (3-2-0)

Nature of the course: Theory

Full marks: 100

Pass marks: 45

Total lectures: 45 hrs.

Level: Bachelor Program: BE

1. Course Description

This course is designed for developing competency of the students in the applications of various mathematical concepts they learned in courses in previous semesters. It is equipped with complex analysis, Z-transform, Partial differential Equations and Fourier Transform. The pre requisite for this course is Calculus I, II and Algebra and Geometry. The course will be delivered through lecture method, assignment on practically base engineering problems and class tests.

2. General Objectives

The course is designed with the general objective:

• To acquaint the students with applications of mathematical tools in engineering.

3. Methods of Instruction

Lecture, tutorials, discussions and assignments

4. Contents in Detail

Specific objectives	Contents				
Understand and apply function of complex variables, Calculus of functions of complex variables and their applications in Engineering problems.	 Unit I: Complex Analysis (17 hrs.) 1.1 Complex numbers and functions (5 hrs.) 1.1.1 Review on Complex number, their geometric representation, Polar form, power and roots. 1.1.2 Sets and functions in complex plane, Limits Continuity and derivatives of function of complex variables. (Definition and concepts only) 1.1.3 Analytic functions, Cauchy-Riemann(C-R) equations as necessary conditions for functions to be analytic, C-R equations as sufficient condition for analyticity (without proof), Polar form of C-R equations (No derivation). 1.1.4 Laplace equation, harmonic functions and harmonic conjugate 1.1.5 Related problems 				
1.2 Integrals in complex plane (4 hrs.)					
	1.2.1 Line integrals in the complex plane, Evaluation of basic line integrals in complex plane				
	1.2.2 Cauchy's Integral theorem, Cauchy's integral formula				

	and Cauchy integral formula of higher order (for analytic				
	functions) without proof.				
	1.2.3 Related problems.				
	1.3 Taylor and Laurent series for functions of complex				
	variables. (6 hrs.)				
	1.3.1 Taylor series and Laurent series (Without Proof) and				
	Related Problems				
	1.3.2 Singularities and zeros, Residues and integration,				
	Cauchy Residue theorem				
	(Without proof) and related Problems.				
	1.4 Conformal mapping (2 hrs.): Special Linear fractional				
	transformation (Bilinear fractional transformation) only.				
Understand and apply discrete	Unit II: Z-Transform and its Applications (10 hrs.)				
transforms and solve difference	2.1 Z-transform, Z-transform of elementary functions,				
equations.	Properties of Z-transforms, Shifting theorems, ini				
	value theorem, final value theorem.				
	2.2 Inverse z-transforms using division method, expansion				
	method, Partial fraction method and residue method.				
	2.3 Application: Difference equations and solution by using				
	Z-transform.				
Understand and apply higher	Unit III: Partial Differential Equations (12 hrs.)				
dimensional systems and	3.1 Partial differential equations and solutions by variable				
describe them by partial	separation method.				
differential equations with	3.2 One dimensional wave equation and its solutions and				
solution techniques and	related problems.				
interpretation of solutions.	3.3 One dimensional heat equation and it's solutions and				
	related problems.				
	3.4 Two dimensional heat equation, Laplace equation (steady				
	state heat equation) and its solution for rectangular				
	boundaries. Laplace equation in polar form and its				
	solution for circular boundaries, related problems.				
Evaluate Fourier integrals and	Unit IV Fourier integral and Transform (6 hrs.)				
Transforms.	4.1 Fourier integral, Fourier sine and cosine integrals and				
	related problems.				
	4.2 Fourier integral in complex form and Fourier transform				
	and inverse transform, Fourier sine and cosine transforms				
	and their inverse transforms, Convolution theorem,				
	Parseval's identity and related problems.				
	* ±				

Note: The figures in the parentheses indicate the approximate periods for the respective units.

5. List of Tutorials

Tutorial work covers the work to be done in tutorial. This will enable the students to compute the mathematics problem under the supervision of the course leader. The major tutorial works are as follows:

Total: 30 Hours

Unit	Unit name	List of Tutorials	Tutorial	
no.			hours	
1	Unit I: Complex	1.1 Problems on differentiability	1 hr.	
	Analysis (9 hrs.)	1.2 Problems on analyticity	1 hr.	
		1.3 Problems on Harmonic and conjugate harmonic		
		functions.	1 hr.	
		1.4 Problems on Integrals using Cauchy integral theorem and formula.	2 hr.	
		1.5 Problems on Taylor's series and Laurent's series	2 hr.	
		1.6 Problems on singularities and residues.	2 hr.	
2	Unit II: Z-	2.1 Problems on Z-transforms of elementary	1 hr.	
	Transform and its	functions.		
	Applications (7	2.2 Problems on Z-transforms using different	2 hrs.	
	hrs.)	theorems.		
		2.3 Problems on inverse z-transforms.	2 hrs.	
		2.4 Solution of difference equations.	2 hrs.	
3	Unit III:	3.1 Problems on separation of variables methods.	2 hrs.	
	Partial Differential	3.2 Problems related to one dimensional wave	2 hrs.	
	Equations (10 hrs.)	equation.		
		3.3 Problems on one dimensional heat equation.	2 hrs.	
		3.4 Problems on two-dimensional heat equation rectangular boundaries	2 hrs.	
		3.5 Problems on two-dimensional heat equation	2 hrs.	
		circular boundaries.		
4	Unit IV Fourier	4.1Problems on Fourier integrals.	2 hrs.	
	integral and	and 4.2 Problems on Fourier Transforms and its inverse.		
	Transform (4 hrs.)			

6. Evaluation System and Students' Responsibilities

Evaluation System

Internal evaluation is done as follows:

Internal Evaluation	Marks	External Evaluation	Weight	Marks			
Attendance & Class Participation	10%						
Assignments	20%	Semester End Board					
Presentations/Quizzes	10%	Examination	50%	50			
Term exam	60%						
Total Internal	50						
Full Marks: $50 + 50 = 100$							

Students' Responsibilities

Each student must secure at least 45% marks in internal evaluation with 80% attendance in the class in order to appear in the Semester End Examination. Failing to get such score will be given NOT QUALIFIED (NQ) and the student will not be eligible to appear the Semester-End Examinations. Students are advised to attend all the classes, formal exam, test, etc. and complete all the assignments within the specified time period. Students are required to complete all the requirements defined for the completion of the course.

7. Prescribed Books and References

Text Book

- 1. Advanced Engineering Mathematics, Erwin Kreszig
- 2. Text Book of Engineering Mathematics, Debashis Dutta , NEW AGE International Publisher

References

- 1. Advanced Engineering Mathematics, Alan Jeffrey
- 2. Engineering Mathematics, S.S sastry Vol.1 and Vol.2
